DETAILED ACTION

Priority

Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claim 4 recites the limitation "the leak detection signal" in line 2 of the claim.

There is insufficient antecedent basis for this limitation in the claim. Claim 4 is dependent from claim 1, however, claim 1 does not set forth a leak detection signal limitation in either positive or intended use recitations.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-4 are rejected under 35 U.S.C. 102(b) as being anticipated by Papanek et al. (4,366,061). Papanek et al. discloses a hemodialysis treatment system and method. The system has two balancing chambers for directing fluid supply to the hemodialysis device. Each balancing chamber is divided by a flexible member into two

chambers and has supply lines and discharge lines connected thereto. Papanek et al. further discloses having a control unit with optical sensors. Claims 1, 2, & 4 recite imitation(s) that have been treated as intended use recitations. It has been held that a recitation with respect to the manner in which a claimed apparatus is intended to be employed does not differentiate the claimed apparatus from a prior art apparatus satisfying the claimed structural limitations. *Ex parte Masham*, 2 USPQ2d 1647 (1987). Since the limitations have not been positively claimed, it the system of Papanek et al. is capable of performing the recited function.
